2007-08 TOYOTA FJ CRUISER **X-METAL SERIES MESH GRILLE**

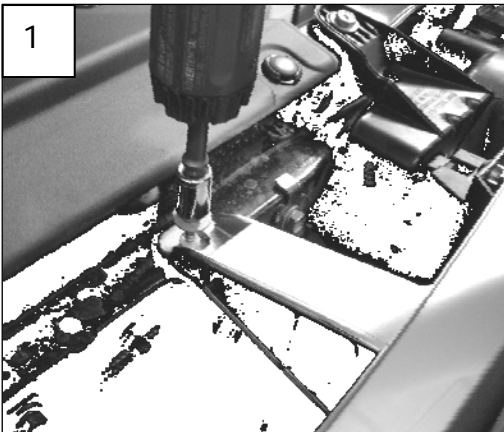

Tools Required:

Phillips / Slotted Screwdrivers
10mm Socket
5/16" Socket
Die Grinder
Epoxy (to re-install factory logo)
Drill & 1/8" Drill Bit

Part List:

1	Grille	1	'T' Bracket
1	'A' Bracket	5	1/2" x 1/2" L Brackets
10	6-32 Nylon Lock Nuts	1	2" Flange Brackets
10	#10 Flat Washers		

Read and understand instructions before attempting installation

Step 1.

Unbolt the two 10 mm bolts on top of the grille (1). Unfasten the three plastic clips securing the grille to the core support; remove the grille. The factory Toyota logo must be removed from the factory mesh. The logo has small pins that go through the grille to the back; these pins are melted to secure the logo. Use a die grinder (or similar tool) to remove the melted plastic. Then the logo can be removed from the front.

Step 2.

Center the grille in place (2). Use the 2" flange bracket to secure the center stud on the bottom. Use the small 1/2 L brackets and remaining nuts and washers to secure the grille.

Step 3.

The factory logo may be re-installed onto grille. If logo is not going to be used; skip to Step 4. The grille is supplied with a pair of stainless steel letters with mounting studs. These letters (T and A) fit into the back of the factory logo. Use a small amount of epoxy to secure the letters in place; allow to dry (cure) in place. Center the logo onto the grille. Drill a pair of 1/8" holes for the studs to reach the back of the grille assembly. Use two washers and nuts to secure the logo.

Step 4.

If a bumper insert is going to be installed; install at this time. Now re-install the grille assembly back onto the vehicle. **Thank you for purchasing a T-Rex Billet Grille. 10/5/06**
