PLEASE READ AND UNDERSTAND ALL INSTRUCTIONS BEFORE INSTALLATION. Auto makers offer varied models to each vehicle and occasionally manufacture more than one body style of the same model. To assure your part is correct; our tech department can be contacted at tech@trexbillet.com to verify fitment or assist with tech questions. All other inquiries can be directed to info@trexbillet.com. In the event you do not have internet access please call 1-800-287-5900.

Step 1

Open the vehicles hood and remove four plastic pop clips and one 10mm bolt from the top of the factory grille. With the top of the factory grille loose, pull the bottom corners outward, there are 3 latches along the bottom that should pop loose (you can use a screwdriver to help unlatch the latches if needed). Now take the fourteen u-nuts and install them onto the 2" Flange Brackets with the barb on the outside (Fig 2). Now take one of the billet grilles and insert it into the appropriate opening in the grille shell (Fig 3). Take the 1 1/4" screws and insert them through the front of the billet bars and the small square tab with a hole in the center, from the backside take the flange bracket with the u-nut installed and place it onto the screw with the flanged ends facing the grille (Fig 4). Tighten the screws. Repeat this on the remaining billet grilles. If you purchased the matching bumper grille install it before you reinstall the factory grille onto the vehicle. Installation complete.
